Eleganz™

Liquid Leaf Clean, Shine and Protect

Removes production residues, restores beauty,
and improves retail performance.

OASIS® Eleganz™ is a proprietary silicone-based, water-soluble concentrate formulated to clean, shine and protect potted foliage. Designed for growers of all sizes, scalable OASIS® Eleganz® lifts spots and residue from foliage, adds shine, extends shelf life, and improves retail sell-through.

OASIS® Eleganz™ Usage Instructions and Dilution Rates

Formulated for versatility and scalability, OASIS® Eleganz™ can be applied by handheld, backpack or boom sprayers to clean, shine and protect foliage plants. This proprietary silicone-based, water-soluble concentrate represents a better way to boost foliage appeal with retailers and consumers.

Always spot test any product, including OASIS® Eleganz™, before applying to a new plant variety. If the concentrate has been stored, we recommend shaking or stirring the concentrate before diluting. OASIS® Eleganz™ is not intended for use as a wash. For complete usage instructions, please refer to Product Usage documents.

SAFETY PRECAUTIONS/HAZARDS

This product is not considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200). The product contains no substances which, at their given concentration, are considered hazardous to human health. As with all chemical applications, follow good practices for handling, including protective gloves and eyewear. For more information refer to the product Safety Data Sheet (SDS).

STORAGE AND HANDLING

Keep in original container in a cool, dry location out of direct sunlight, above freezing temperatures (32°F, 0°C). Flash Point (>212°F, >100°C). Stored properly, product shelf life is 2 years from manufacture date.

WARRANTY

Seller warrants that this material conforms to its chemical description and is suited for the purposes stated on the label when used in accordance with directions under normal conditions of use. Seller makes no other expressed or implied warranty.

DISPOSAL

For opened and/or unused product, please check with your local waste disposal facility for appropriate options. After thorough rinsing, used containers may be offered for recycling or reconditioning or disposed of according to local or national regulations. Do not reuse empty containers.

FOOD SAFETY

This product is intended only for use on ornamental/foliage plants, not food use.

Mixing and General Application Instructions

OASIS® Eleganz™ concentrate must be diluted with water for application. Used as directed, scalable OASIS® Eleganz™ may be injected through common greenhouse irrigation systems. For best results, mix or inject OASIS® Eleganz™ with room temperature water (65°F, 18°C – 75°F, 24°C).

1. Select the rate of dilution based on the desired effect, as indicated in the Dilution Rates chart below.
2. Mix the concentrate thoroughly with water. **Do not** use water with added fertilizer, spreader-sticker or other additives.
3. Apply the solution to cover foliage evenly and thoroughly to the point of run off.
4. OASIS® Eleganz™ will initially bead on the leaf surface, then spread evenly and uniformly as drying occurs.

Once diluted, OASIS® Eleganz™ remains uniform for an extended time period. However, we recommend using diluted concentrate soon after mixing and storing only undiluted concentrate.

DILUTION RATES

Dilution Rate (%)	Effect	fl oz of concentrate per gal of water	mL of concentrate per L of water	Injection Rate of Concentrate
2.5%	Clean, Shine and Protect	3.2 fl oz	25 mL	1:40 (25 mL/L)
2%	Light Shine	2.6 fl oz	20 mL	1:50 (20 mL/L)

INSTRUCTIONS FOR CLEAN, SHINE AND PROTECT - 2.5% DILUTION RATE:

- The optimal rate to clean, shine and protect foliage is 2.5% concentrate diluted in water.
- For mild to moderate residue, spray foliage evenly and thoroughly to the point of run off. Note the spray will initially bead, then dry uniformly to an even, consistent shine.
- One full 2.5% spray application is typically sufficient to clean, shine and protect. As beading disperses, residue should lift off the leaf surface.
- For moderate to severe residue buildup, a second 2.5% application is recommended. Allow plants to dry before a second full application at 2.5%.
- Foliage typically dries within 60-75 minutes after application. Greenhouse conditions influence drying time.

INSTRUCTIONS FOR LIGHT SHINE ONLY - 2.0% DILUTION RATE:

- The optimal rate to clean, shine and protect foliage is 2.5% concentrate diluted in water.
- For residue-free foliage, apply to cover foliage evenly and thoroughly to the point of runoff. Product will bead on the leaf surface initially, then dry to an even, consistent shine.
- A single application at 2.0% dilution rate should be sufficient to give clean foliage a light, natural-looking shine.
- Dilution rate can be adjusted to increase or decrease shine intensity.
- Foliage typically dries within 1 hour after application, but drying time is influenced by greenhouse conditions.
