

OASIS®

RhizoPlug™ Sheet Propagation Kit

Next-Generation Substrate for Superior Growth

Channel your passion for propagation and start your cuttings strong with OASIS® RhizoPlug™ Sheet Propagation Kit. With these simple instructions, you can enjoy a superior propagation experience and elevate your results. OASIS® RhizoPlug™ is ideal for propagating cuttings of hemp, herbs, flowers and more.

WHAT'S INSIDE

- | Qty | Description |
|-----|---|
| 2 | 1020 trays (one primary tray with drainage holes, one solid bottom tray). |
| 1 | 50-count or 104-count OASIS® RhizoPlug™ Sheet propagation substrate. |
| 1 | Instruction sheet for proper use and optimal results. |

1 Prepare to Propagate

Free of pests and pathogens, OASIS® RhizoPlug™ Sheet ships clean, dry and inert, giving you maximum flexibility as you grow. Success starts with these essentials:

- ✓ Follow our instructions to fully saturate the substrate *before* you stick cuttings.
- ✓ Use a complete nutrient solution for initial saturation and ongoing irrigation.

2 Saturate Your Substrate

Full saturation of your substrate prior to sticking helps cuttings rehydrate rapidly and keeps water and nutrients readily available from the start.

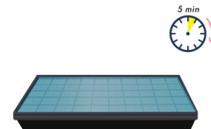

Step 1

Place the substrate sheet in the primary tray. Set the primary tray in the solid tray.

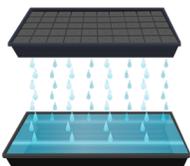

Step 2

Using a watering can, completely fill the tray with 1.5 gal (≈ 6 L) of nutrient solution.

Step 3

Let the substrate soak for 5 minutes, for thorough and uniform saturation.

Step 4

Lift the primary tray out of the solid tray, and let the substrate drain freely.

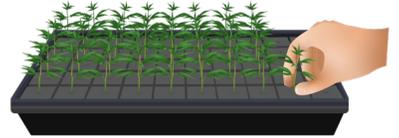

Step 5

Water the substrate uniformly overhead with 1 gal (≈ 4 L) of nutrient solution to optimize the rootzone conditions. Let excess water drain.

3 Stick Your Cuttings

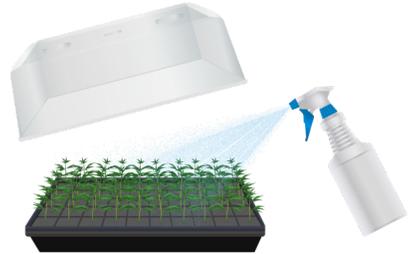

Insert your cuttings as soon as your saturated substrate is prepped. For the right depth, hold the cutting between your thumb and index finger 1/2 to 5/8 in (1.25 to 1.5 cm) above the tip. Insert the tip until your fingers touch the substrate.

4 Manage the Rooting Environment

A humid environment with diffused, low light intensity minimizes water loss and encourages faster rooting. Place your cuttings under a humidity dome and check them daily. Mist with a spray bottle and adjust dome vents as needed. Once cuttings establish, water the substrate uniformly as required. Remove the dome to increase light intensity or provide supplemental light.

NOTE: Used properly, OASIS® RhizoPlug™ Sheet keeps water readily available to cuttings. Never allow your substrate to sit in excess water during rooting. Always let water drain freely and empty excess from the solid tray.

5 Transplant Your Cuttings

Before you transplant, make sure your substrate is thoroughly saturated for easier handling. The sheets are etched around the plugs for easy separation.

Step 1

Lift the substrate sheet and reach from the bottom to select a group of plugs.

Step 2

Use a top-down breaking motion to separate the sheet into individual plugs.

Step 3

Transplant the plugs into moist potting media, and water thoroughly. Be sure to cover the plug with potting media.

About OASIS® RhizoPlug™ Sheet

OASIS® RhizoPlug™ Sheet propagation media represents a new generation of engineered substrate technology designed for superior performance. Professional propagators and cultivators of all sizes trust their cuttings to the substrate in this kit.

Compared to its predecessor, OASIS® RhizoPlug™ Sheet promotes faster rooting and establishment, greater uniformity and consistency, and a cleaner propagation experience. If you like OASIS® Rootcubes™, you'll love OASIS® RhizoPlug™ Sheet.

About Oasis Grower Solutions

Oasis Grower Solutions, a division of Smithers-Oasis, has been helping commercial breeders and propagators solve problems and grow better plants since 1969.

From its propagation roots, Oasis Grower Solutions has grown to provide a stream of substrate innovations and ancillary products to help growers grow and plants thrive. That innovation comes to home growers with OASIS® RhizoPlug™ Sheet Propagation Kit.
